Dropbox Two-Factor Authentication (2FA)

**logintc.com**/docs/connectors/adfs-dropbox

Overview

The LoginTC AD FS Connector protects access to your Microsoft Active Directory Federation Services (AD FS) by adding a second factor LoginTC challenge to existing username and password authentication. The LoginTC AD FS Connector provides a LoginTC multi-factor authentication (MFA) method to your AD FS deployment, used by your Dropbox Enterprise account.

Subscription Requirement

Your organization requires the **Business** or **Enterprise** plan to use the LoginTC AD FS Connector. See the Pricing page for more information about subscription options.
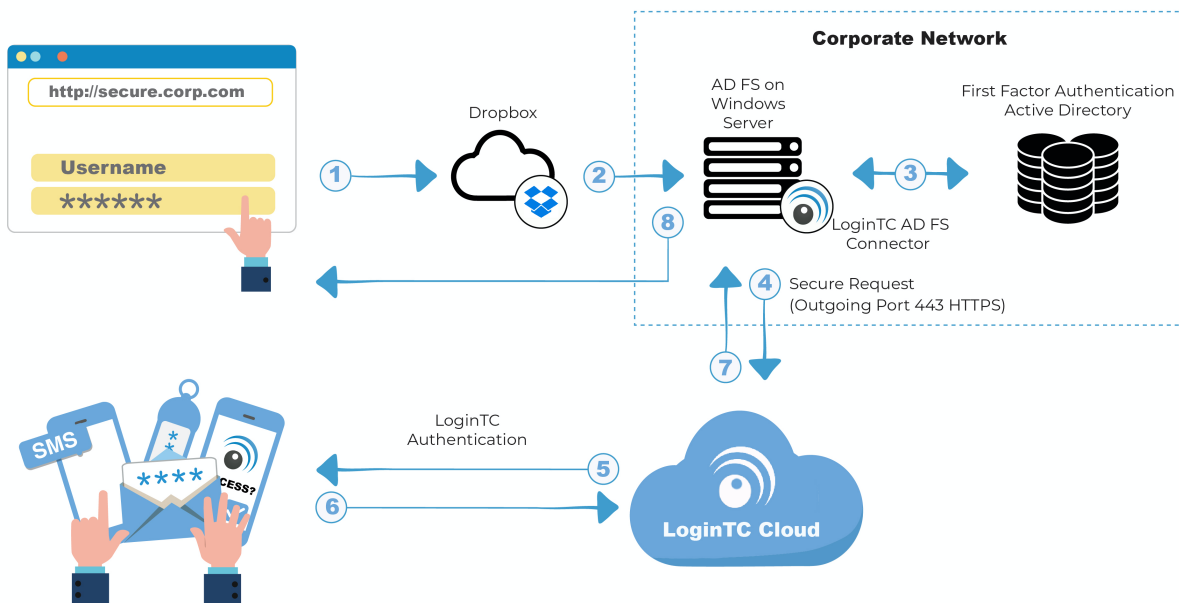

User Experience

After entering the username and password into the AD FS login page, the user is shown a selection of second factor options. The user clicks a button to receive a LoginTC push notification, authenticates and is logged in.
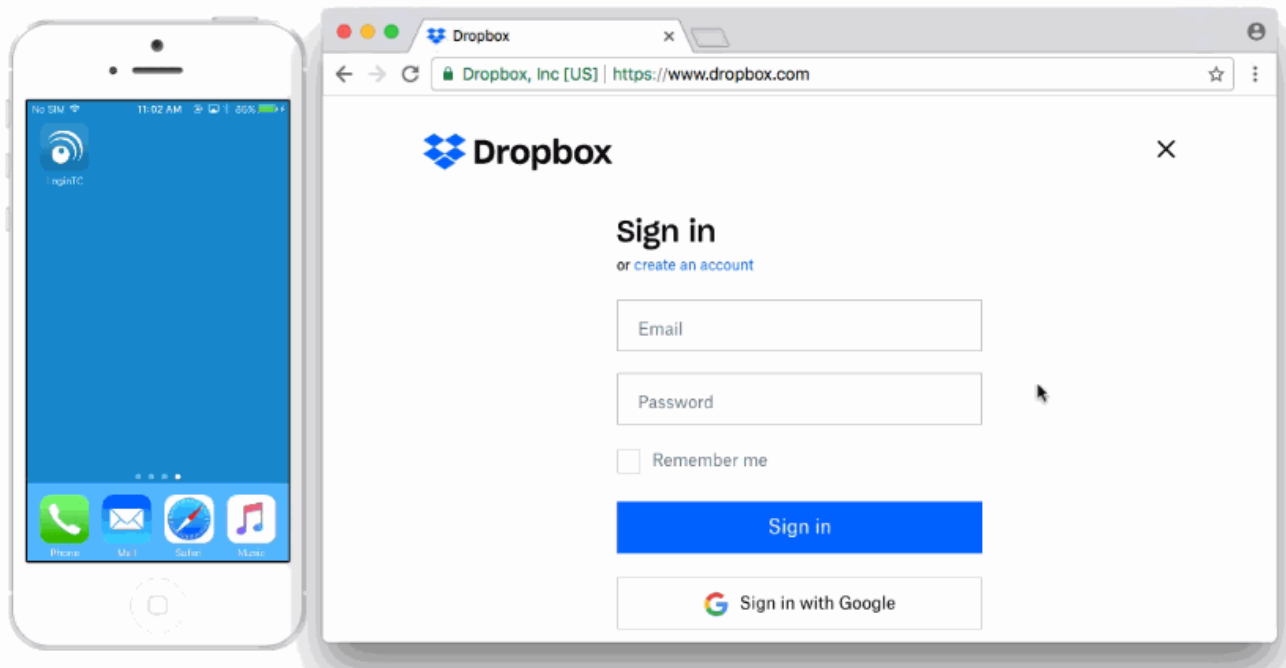

- LoginTC Push
- OTP

Architecture

Authentication Flow

1. A user attempts access to Dropbox with username / password
2. A SAML request is made to AD FS
3. The username / password is verified against an existing first factor directory (i.e. Active Directory)
4. The request is trapped by LoginTC AD FS Connector and an authentication request is made to LoginTC Cloud Services
5. Secure push notification request sent to the user's mobile or desktop device
6. User response (approval or denial of request) sent to LoginTC Cloud Services
7. The LoginTC AD FS Connector validates the user response
8. User is granted access to Dropbox

Prerequisites

Before proceeding, please ensure you have the following:

- Dropbox configured with federation to your on-premise AD FS
- LoginTC Admin Panel account
- Active Directory Federation Services (AD FS) Host, Microsoft Windows Server 2016 (or Windows Server 2012)

Working Dropbox Federation Deployment

It is strongly recommended that you have a working Dropbox with federation against your on-premise AD FS prior to adding LoginTC multi-factor authentication. Please see the

guide, <u>How do I connect Dropbox to AD FS 3.0 for single sign-on (SSO)</u> to configure your Dropbox to use your on-premise AD FS.

Create Application

Start by creating a LoginTC Application for your deployment. An Application represents a service (e.g. An application is a service (e.g., VPN or web application) that you want to protect. e) that you want to protect with LoginTC.

Create a LoginTC Application in <u>LoginTC Admin Panel</u>, follow <u>Create Application Steps</u>.

If you have already created a LoginTC Application for your deployment, then you may skip this section and proceed to <u>Installation</u>.

Normalize Usernames

Usernames in ADFS are typically in the form "CORP\john.doe", while in the LoginTC Admin Panel it is generally more convenient to simply use "john.doe".

Configure `Normalize Usernames` from the Domain settings by navigating to **Domains > Your Domain > Settings**.

Select `Yes, Normalize Usernames` scroll down and click `Update`.

Installation

1. Download the latest version of the <u>LoginTC AD FS Connector</u>
2. Run the installer file as a privileged administrator user on the Windows Server with the AD FS role. Also ensure that the AD FS service is running prior to installing.

3. Press **Next**
4. Read the License Agreement and press **Next** if you accept the terms.
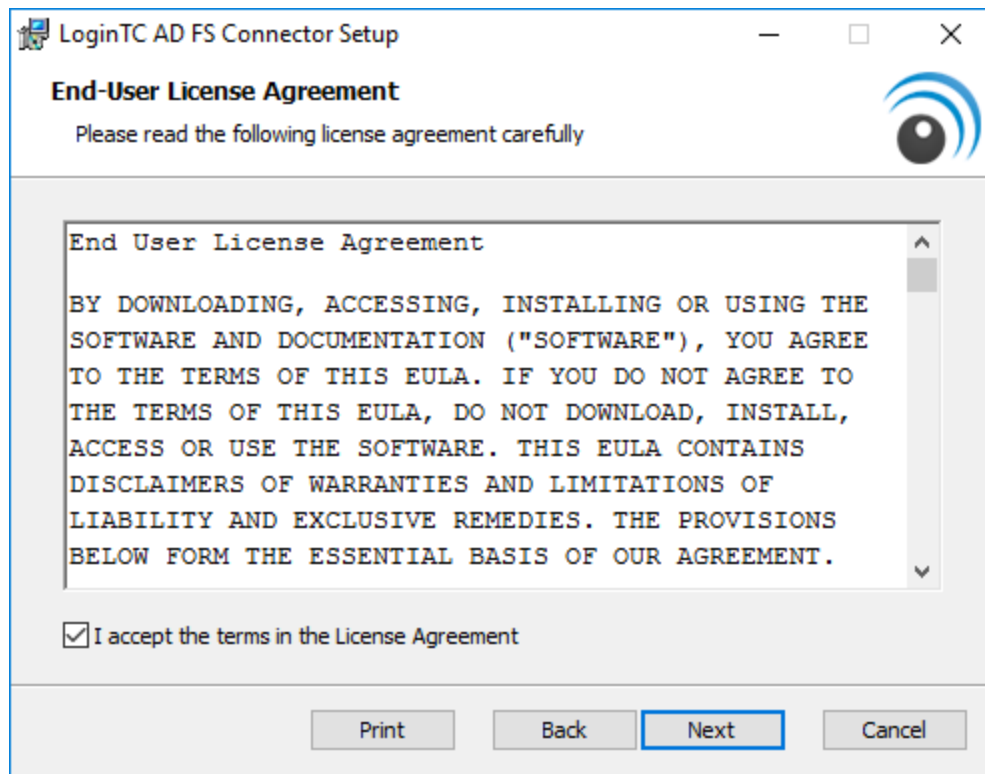

5. Change the **LoginTC API Host** only if you have a private enterprise LoginTC deployment. Press **Next**:

6. Enter your LoginTC **Application ID** and **Application API Key**. These values are found on your LoginTC Admin Panel. Press **Next**

7. Press **Install**. Note that the AD FS service will be restarted during installation and may be temporarily unavailable to your users.

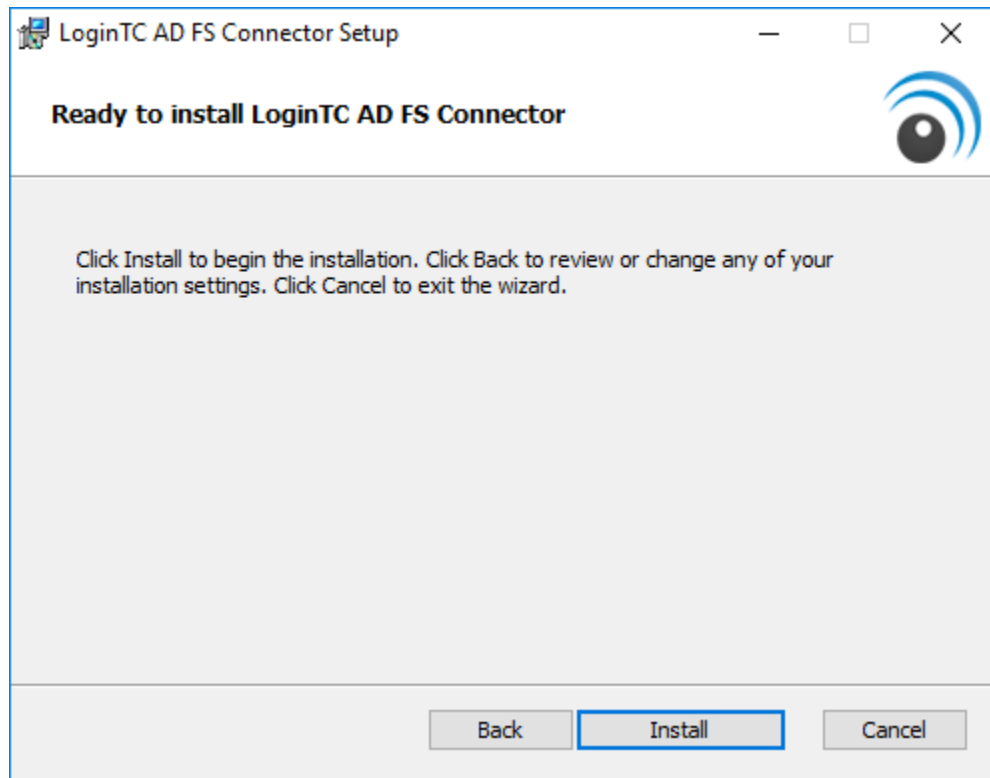

Configuration for AD FS Dropbox 2FA

Windows Server 2016 (AD FS version 4.0)

The instructions below are for AD FS (version 4.0) running on Windows Server 2016. If you have AD FS (3.0) running on Windows Server 2012 R2, see AD FS Configuration in Two-factor authentication for AD FS on Windows Server 2012 R2.

To configure your AD FS to use the LoginTC MFA method:

1. Open the **AD FS Management** console.

2. Click on the **Services > Authentication Policies** directory in the left side menu.
3. Click on **Edit Global Multi-factor Authentication…**
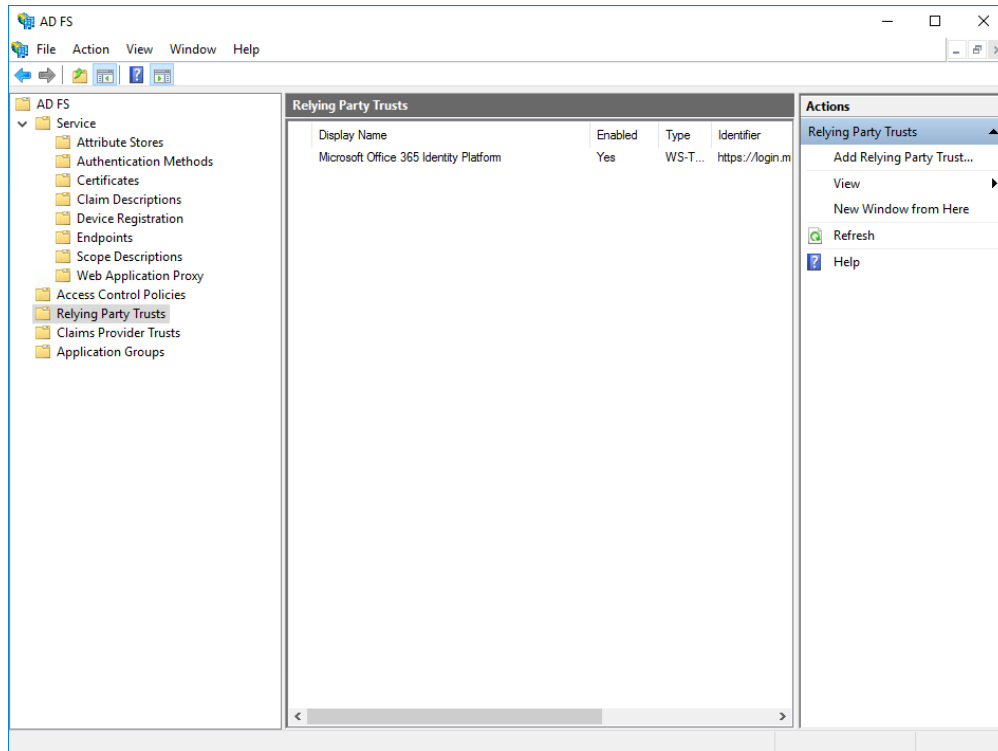

4. Check **LoginTC** in the list of MFA methods.

5. Click on **Relying Party Trusts** in the left side menu
6. Select the Relying Party you wish to add LoginTC MFA to

7. Click on **Edit Access Control Policy…** under Actions in the right sidebar

8. Select an access control policy that uses MFA (e.g. **Permit everyone and require MFA**)
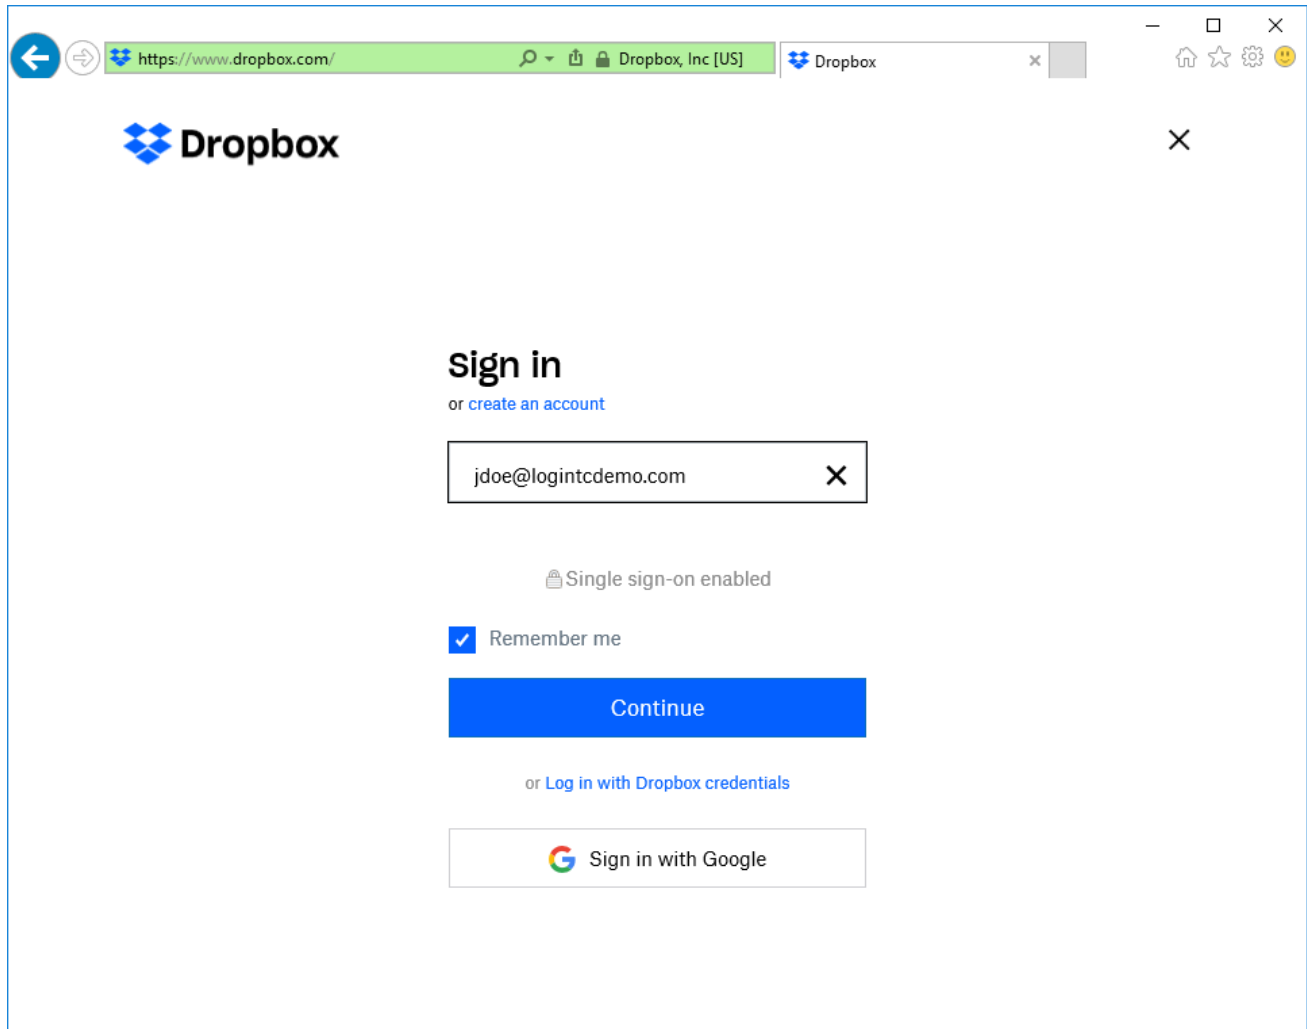

9. Press **Apply** and **OK**

Your AD FS login will now present the user with a secondary LoginTC authentication page.
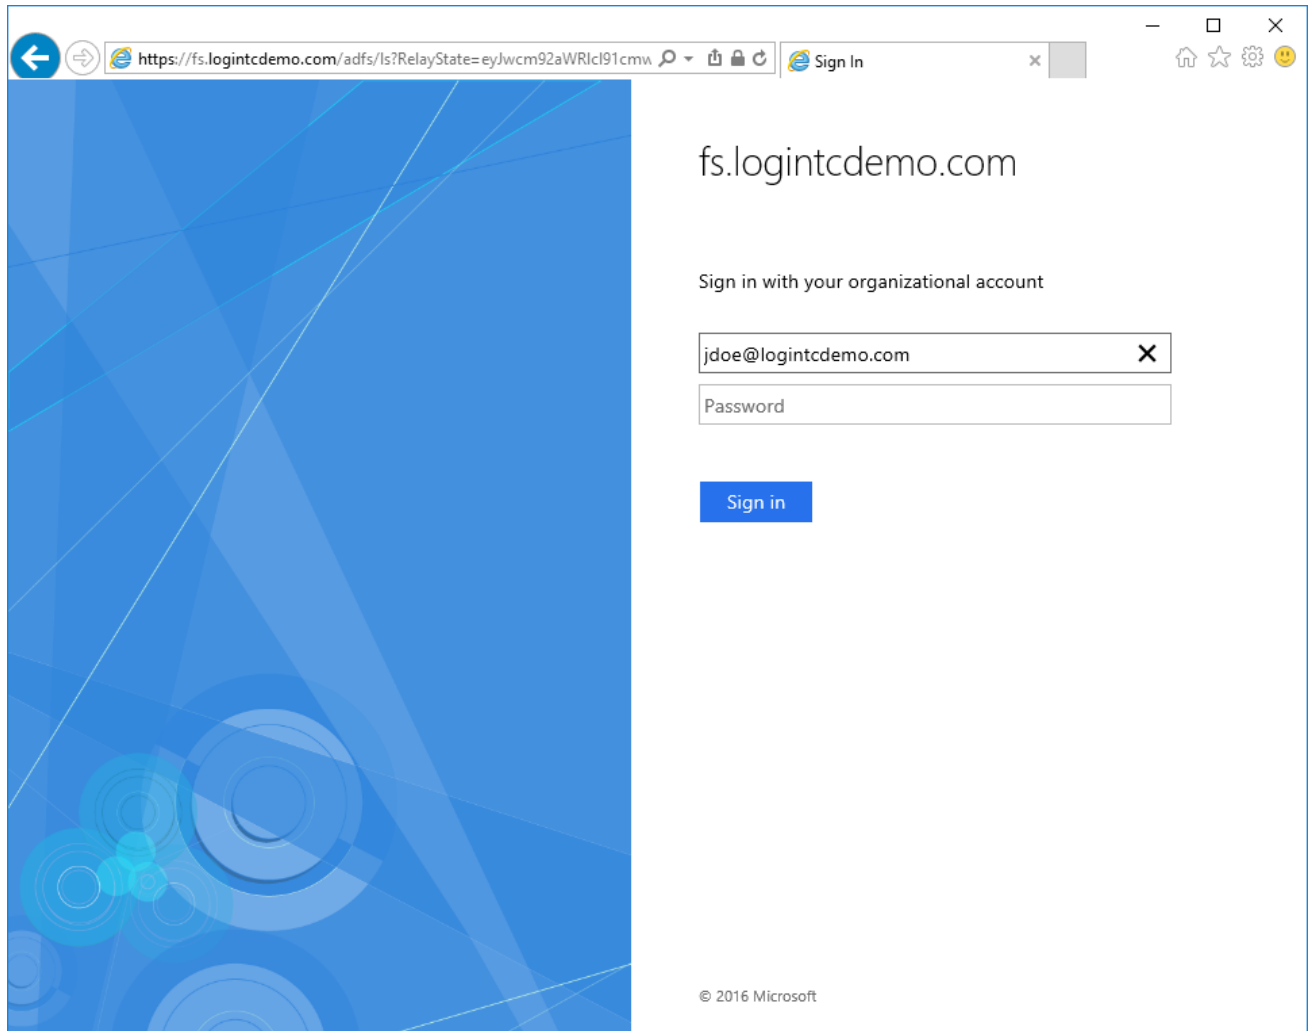

Usage

User Usage

The user proceeds to the Dropbox sign in page as they normally would where they enter their username.

The user is brought to your on-premise AD FS where they are prompted to enter their username and password.
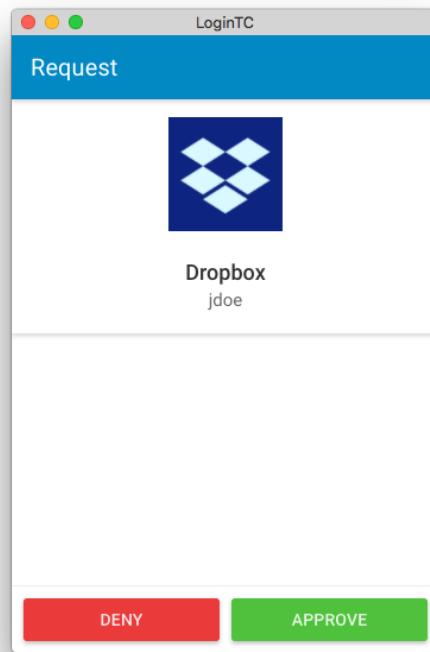

After successfully authenticating with their username and password, the user is presented with options to log in with LoginTC. The user may select to authenticate using LoginTC push, bypass codes, or OTPs.
If the user selects LoginTC push, they are informed to approve the LoginTC request on their device. The user is also presented with an option to remember their LoginTC login choice. The next time the user logs in they will automatically receive a LoginTC push notification. The user may also cancel the login attempt and return to the login page.
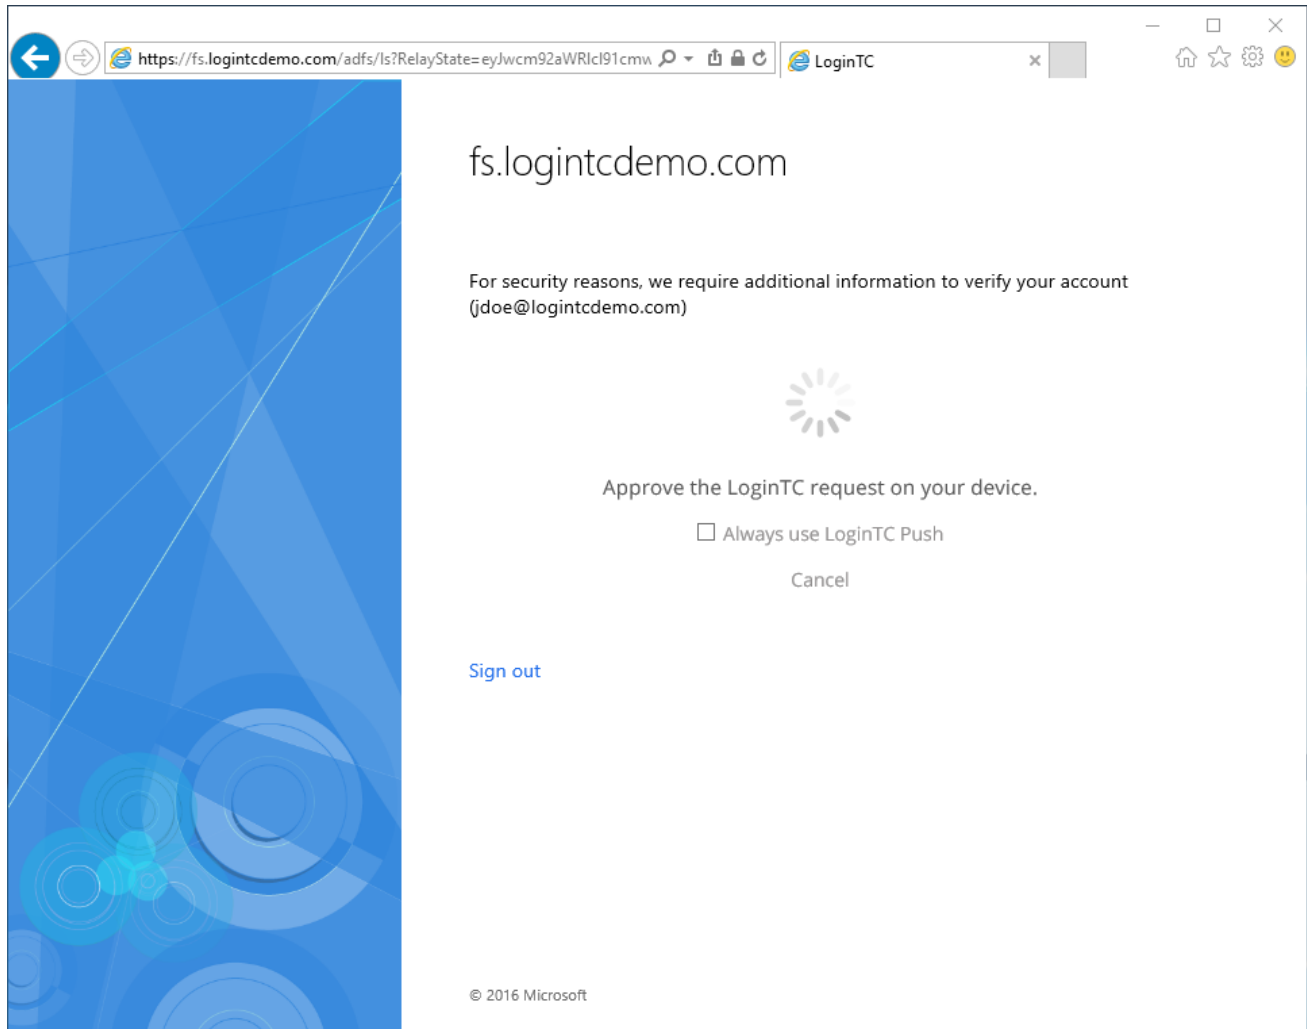

The user receives a push notification on their device where they have provisioned their LoginTC token.
After successfully authenticating with LoginTC, the user is redirected back to Dropbox.
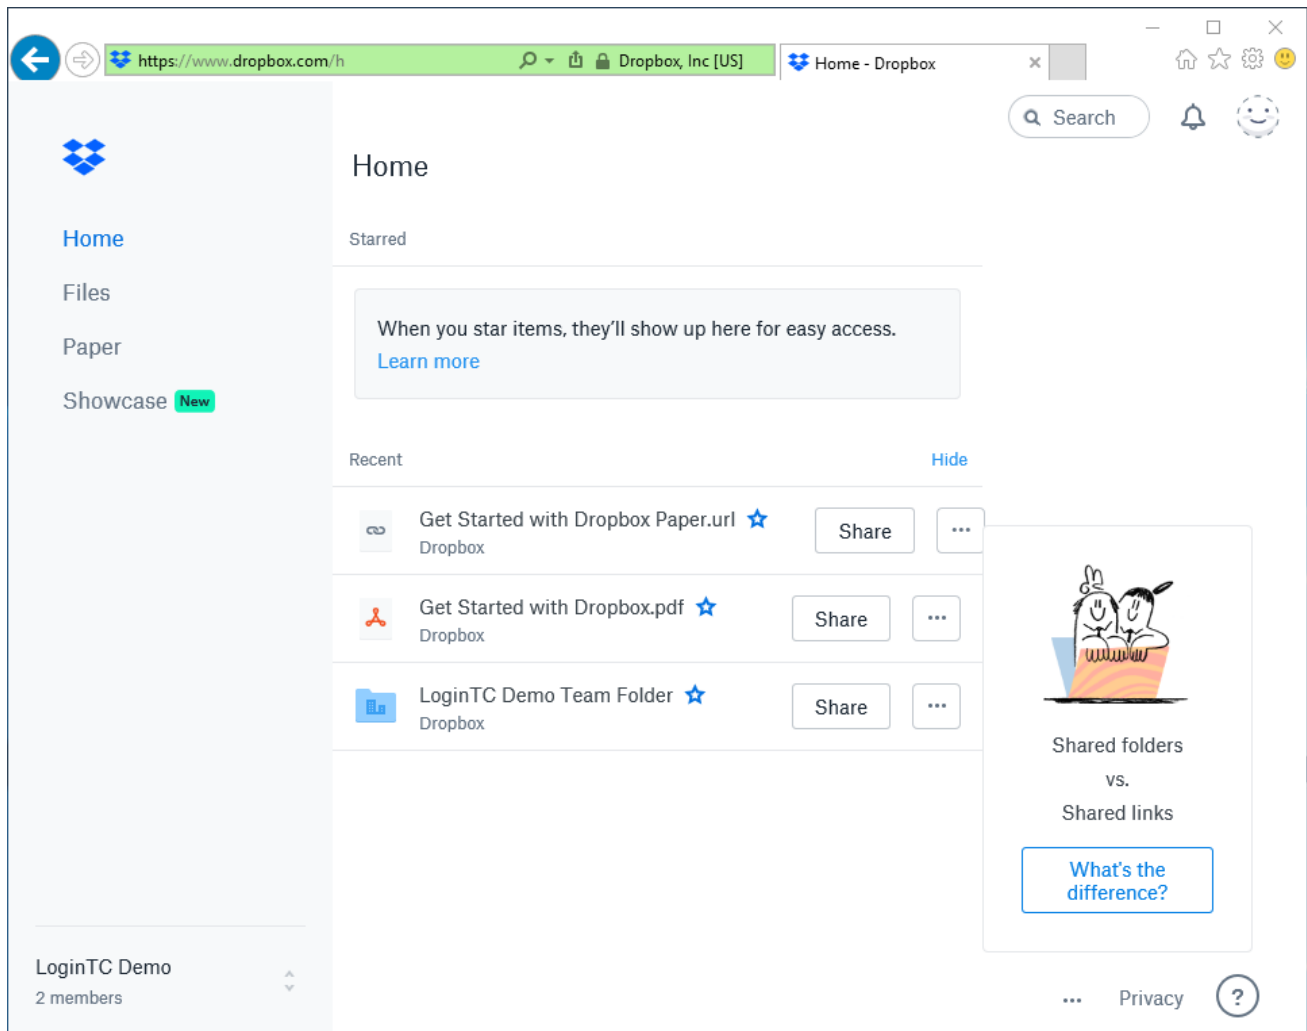

Logging

The LoginTC AD FS Connector logs events to the Microsoft Event Viewer
under **Applications and Service Logs → LoginTC**. In some cases, it may be helpful to
also look at the general AD FS logs under **Custom Views → ServerRoles → Active
Directory Federation Services**.

Uninstallation

To uninstall the LoginTC AD FS Connector, simply navigate to the **Add or remove programs** in the Windows **Control Panel**, find LoginTC AD FS Connector in the list and follow the prompts.

Prior to Uninstalling

Prior to uninstalling the LoginTC AD FS Connector, ensure that the LoginTC MFA method is not being used in any of your AD FS authentication policies. The uninstallation will fail if the LoginTC MFA method is being used in any of your AD FS authentication policies.
